SOHAM PHUTANE

Forward Deployed AI Engineer · AI/ML Engineer

soham.phutane@uni-konstanz.de | +49 15510 389034 | github.com/Soham2704 | linkedin.com/in/soham-phutane-3689662b7 | **Konstanz, Germany**

PROFILE

AI engineer specializing in deployable multi-agent systems, RAG pipelines, and production automation agents — with hands-on experience building enterprise AI solutions that cut Fortune 500 client workflows by up to 95%. IEEE-published researcher in applied AI. **M.Sc. Computer & Information Science student at the University of Konstanz (Oct 2026)**, actively seeking a Werkstudent or part-time role in AI/ML engineering with 20h/week, on-site or remote.

TECHNICAL SKILLS

AI/ML: LangChain, LangGraph, PyTorch, Stable-Baselines3, Hugging Face, Scikit-learn, FAISS, ChromaDB, MCP, Gymnasium

Backend & APIs: FastAPI, SQLAlchemy, SQLite, Streamlit, Uvicorn, Docker, Pytest **Cloud:** AWS (Lex, Lambda, Serverless) **Automation:** N8N, Pytesseract (OCR)

Languages: Python, C++, SQL **Dev Tools:** Git, GitHub, Docker, Pytest **Human Languages:** English (C1), German (A1 – actively learning)

WORK EXPERIENCE

Supervity.AI | *Forward Deployed AI Engineer* May 2026 – Aug 2026

- Deployed a **production automation agent** for a Fortune 500 company, cutting workflows that previously took hours down to minutes — a **>85% reduction** in manual processing time.
- Integrated **AI document intelligence** for a U.S. client, reducing end-to-end document processing from hours to under **5 minutes (~95% turnaround reduction)** with zero disruption to existing enterprise systems.
- Collaborated cross-functionally with U.S. and Indian client teams to scope, build, and ship **production-ready agentic pipelines**, translating business requirements into deployable AI within tight delivery timelines.

Primus Technologies AI | *AI Intern* Feb 2026 – Apr 2026

- Deployed **4 live conversational chatbots** directly to the company website using **AWS Lex + AWS Lambda**, handling real customer traffic from day one of launch.
- Engineered an independent **real-time vehicle tracking system** from scratch using **Mapbox API + AWS Serverless** architecture, enabling live fleet visibility with zero additional server infrastructure.
- Built a specialized **routing system for truck fleets** and a **serverless WhatsApp chatbot**, extending the company's communication infrastructure and automating dispatch workflows end-to-end.

SELECTED PROJECTS

Multi-Agent AI System for Regulatory Compliance [GitHub] [DEMO]

- Architected a deployable **FastAPI service** to automate analysis of **400+ page regulatory documents**, engineering an AI data pipeline (OCR → SQLite) that **reduced manual data curation from days to under 30 minutes**.
- Engineered a **Human-in-the-Loop RL (HIRL) agent** in a custom Gymnasium environment that **achieved >80% accuracy** by learning from user feedback; automated the full pipeline with **N8N**, validated by a pytest suite.

Technologies: *Python, FastAPI, SQLAlchemy, LangChain, Stable-Baselines3, PyTorch, Streamlit, Gymnasium, Hugging Face, FAISS, Google Generative AI, Pytesseract, Docker, Pytest, MCP*

Agentic PDF Reasoning System [GitHub] [DEMO]

- Architected a multi-agent orchestration engine using **LangGraph with 3 specialized agents**, enabling the system to synthesise cross-document insights and resolve complex logical queries across **multiple files** with high precision.
- Engineered a precision visual citation mechanism achieving **100% traceability** — mapping AI responses to exact page coordinates to effectively **eliminate hallucinations** caused by complex PDF formatting.

Technologies: *Python, LangGraph, Google Gemini Pro, ChromaDB, Streamlit, PyMuPDF, BAAI Embeddings*

Post-Discharge Medical AI Agent [GitHub] [DEMO]

- Architected a hierarchical **multi-agent orchestration system** (Receptionist & Clinical) using LangChain that automates patient triage and query routing, reducing manual information retrieval latency by **over 90%**.
- Engineered a **hybrid RAG pipeline** integrating local clinical guidelines (ChromaDB) with real-time web verification (Tavily), ensuring high-accuracy responses for **25+ distinct patient profiles** with complete citation logging.

Technologies: *Python, LangChain, Google Gemini API, ChromaDB, Tavily Search API, Streamlit, JSON*

EDUCATION

M.Sc. in Computer and Information Science Oct 2026 – Sep 2028

University of Konstanz, Konstanz, Germany

Focus: Artificial Intelligence, Machine Learning, Data Science, Information Systems

B.E. in Artificial Intelligence & Data Science Dec 2021 – Jun 2025

University of Mumbai **GPA: 8.39 / 10.0**

Core Subjects: Artificial Intelligence, Machine Learning, Deep Learning, Big Data Analytics, Cryptography & System Security

PUBLICATION – IEEE CONFERENCE PAPER [LINK]

"Comment Compass" — IEEE First International Conference on Pioneering Developments in Computer Science & Digital Technology, Aug 2024. AI-powered YouTube sentiment analysis system using web scraping and Generative AI for actionable creator analytics. Co-authored with 3 researchers.
